Sale Terms

GENERAL SALE INFORMATION:

Terms of sale are cash or check unless prior credit arrangements are established between the buyer and the seller.

HERD HEALTH

Health certificates for each bull will be provided at time of sale for shipment to most locations in the United States. All bulls will have passed a breeding soundness examination, BVD test, PAP test, and PCR trich test. All bulls are under 18 months of age and are guaranteed virgin bulls.

VACCINATION PROGRAM

All bulls have been vaccinated at branding, weaning, and post-wean boosted with a 5-way, 8-way with somnus, and either decotomax injectable and/or pour on wormer.

SUPPLEMENTAL INFORMATION

A supplemental data sheet with complete updated and additional information will be available on sale day and online at www.xyzranch.net and www.tender-lean-cattle.com.

REGISTRATIONS

All bulls unless noted otherwise as commercial are either registered or able to be registered. If a buyer wishes to have the registration papers transferred into their name, he or she may request so in the office after paying for the purchase. EPDs for bulls that have not been recorded with the North American Limousin Association have been estimated by averaging the bull's sire and dam's EPDs.

ANNOUNCEMENTS

Announcements made sale day and from the auction block during the sale will take precedence over printed material in the catalog or other printed material associated with the sale.

BREEDING GUARANTEE:

All bulls sold will have passed a semen test. All bulls purchased for \$3,000 or more are guaranteed through the first breeding season (sale day to Sept. 1), unless there is gross negligence or willful misconduct on the part of the purchaser. If a bidder has the winning bid at less than \$3,000, he or she may choose to pay the difference in order to purchase the guarantee.

If there is permanent injury or death of the purchased bull, a credit of the original purchase price minus the salvage value of \$1,800 will be given to the buyer—paid either by a replacement bull, if available, or credit at the next year's sale. If the buyer chooses to be credited, the credit must be used at the next year's sale. The original purchaser must contact the seller within 14 days of discovery of injury or death of the bull.

LIABILITY:

Each animal will be at the buyer's risk as soon as sold. Every precaution will be taken for the welfare of the cattle sold. Neither the owners or Delta Sales Yard can be held responsible for any accidents; however, every effort will be made to provide for the safety and comfort of those attending the sale.

MAIL AND PHONE BIDS:

Mailed or phone bids will be handled in a confidential manner. Please contact the Holly Varner at Delta Sales Yard (970) 874-4612 and she will work with you to make sure your bid is handled in the most confidential and professional manner. We will guarantee any bull purchased sight-un-seen to satisfy you.

Dear Friends,

Dear Friends,

We would like to sincerely thank our loyal customers, friends and neighbors for the success over the years. There are so many who have helped and supported us throughout the years, making it possible for our family to grow in this business. Internal, mutual industry support reiterates the fact that, even though we survive in a competitive market—we depend upon each other to stay in business. As seed stock producers, we feel a strong responsibility to help our customers succeed. In this year's offering you will find the kind of bulls that will keep all of us in business together.

The 2020 sale bulls are a complete palette for implementing a successful, strategic crossbreeding program. You will find a full spectrum of genetics, ranging from high to low percent Limosin. We have strived for over 30 years to be the one-stop shop for all the genetic ingredients to build a successful operation.

I would also like to stress—these bulls come from "blue collar cows." Our cows must earn their keep. We expect them to breed as heifers in 90 days, calve on their own, walk to the mountain in the spring, raise their calves at elevations up to 10,000 feet, wean a quality calf, breed back on time and walk home in the fall WITHOUT any special treatment. We DO NOT creep our calves and we DO NOT jeopardize the soundness of our bulls by pushing them too hard on feed. The bulls went to the feed lot in mid-December and have been on a ration to gain three lbs./day. We are particularly proud of how we have developed these bulls out on pasture. These bulls come into the lot to eat and spend the majority of their time working out in a 10-acre pasture.

Just like any market, the cattle industry is subject to trends. Though we believe in being forward thinking, and strive to take advantage of new management tools like DNA profiling and feed efficiency, we believe that common sense and practicality are perhaps the best determinants for success. We implement strict culling practices in order to find the cattle that work for us, and hopefully they will work for you. We encourage you to stop by or give us a call. **This set of bulls is by far our favorite group to date!**

Sincerely,
The Where Two Trails Meet Family

PAP Guidelines

Selecting Beef Cattle for High Altitude Conditions

| Altitude | Recommendation |
|---------------------|------------------|
| Below 5,000 feet | PAP not an issue |
| 5,000 to 7,000 feet | PAP <50 mm Hg |
| 7,000 to 9,000 feet | PAP <45 mm Hg |
| Above 9,000 feet | PAP <41 mm Hg |

Values listed are for animals 18 months of age and older PAP values will typically be 2 mm hg lower when measured at 12 months of age.

Using Limousin & Lim-Flex

The North American Limousin Foundation (NALF) uses all available information to predict an animal's EPD. This information includes: individual performance, pedigree, progeny and grand progeny performance, and genomic information. All this information is combined into one, easy to use, number that helps producers make genetic improvement in their herd.

Since the spring of 2015, NALF joined 11 other U.S. and Canadian breed associations to form the largest international multi-breed cattle evaluation in the world through International Genetic Solutions (IGS). This allows growth and carcass EPDs for Limousin and Lim-Flex (limousine x Angus hybrid) animals to be directly compared with Red Angus, Simmental, Gelbvieh, Shorthorn, Maine Anjou, and Chianina animals (and all their hybrid animals). This makes selection decisions easier for commercial producers.

Listed below are the definitions for Limousin and Lim-Flex EPDS and the units in which they are published. For more information visit www.NALF.org or call 303-220-1693.

CED stands for Calving Ease Direct and is important when choosing sires to produce calves born easily. The higher the number means easier calving.

BW express the difference in birth weight on the progeny of the bulls being compared. Lower birth weight EPDs indicate lighter progeny birth weights

WW expresses the difference in pounds at 205 days on the progeny of the bull being compared.

YW expresses the difference in pounds at 365 days on the progeny of the bull being compared.

MA stands for milking ability and predicts differences in weaning weights from daughter's calves due to genes inherited for milk.

CEM stands for Calving Ease Maternal and is important for choosing sires that produce replacement females that give birth to their first calf easily. The higher the number, the better.

SC compares the difference in centimeters of Scrotal Circumference of expected sons. The scrotal EPDs are a good indicator of age of puberty of both the sons and daughters of the animal.

\$MTI stands for Mainstream Terminal Index and predicts the genetic differences in profit per carcass by combining the potential for and value of post-weaning growth, quality grade and yield.
